-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kirby et al. (US 6,549,229 B1, hereinafter "Kirby") in view of Cline (US 4,903,298).

Kirby discloses an integrated secure videoconferencing communications system (self-contained video teleconferencing system), comprising:

an inverse multiplexer (IMUX; col. 4, line 21);

an encryption device (COMSEC device; col. 2, lines 31-38; col. 7, lines 58-61);

a codec (CODEC; col. 1, line 34).

Kirby differs from the claims in that although it teaches connecting the encryption device for secure communication or bypassing the encryption device for non-secure communication (col. 7, line 58 – col. 8, line 25), it does not explicitly describe a black side switch, a red side switch or a controller for controlling connection paths. However, Cline teaches the well known use of such switches (relays 210/212/214 and 211/213/215/216/217/218; Figure 6; col. 7, line 29 – col. 8, line 13) as well as a controller (microprocessor 204) for switching between secure and non-secure communication modes (col. 7, line 44 – col. 8, line 68). It would have been obvious to an artisan of ordinary skill to incorporate such switches and controller, as taught by

Cline, within the system of Kirby in order to allow a user to easily select between secure and non-secure modes.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Gattis et al. (US 5,062,136) and Smith (US 5,056,136) show other relevant video communication systems.
